ODOO PROJECT DEMO PRESENTATION GUIDE

Subscription Management System: Demo Flow & Script

Narrative Case Study: “A Month at Brightloop Software” (Target Runtime: 4:45 / Max 5:00)

Structure your project demonstration to take full advantage of your **5-minute maximum limit** (targeting **4:45** to leave a safe 15-second buffer) by following **A Month at Brightloop Software**. Rather than rushing through screens, pace the narrative across three distinct roles—**Admin**, **Internal Staff**, and **Customer**—to thoroughly prove every lifecycle state, calculation rule, and performance benchmark required in the challenge.

1. Recommended Demo Video Flow (5-Minute Pacing)

Timestamp	Demo Phase	Active Role	Core System Capabilities Demonstrated
0:00 – 0:50	**1. The Hook & Role-Based Access**	**Customer & Admin**	Contrast Brightloop's spreadsheet chaos with the unified platform. Show customer registration with unique email check, strict password validation (8+ chars, uppercase, lowercase, special char), password reset email link, and Admin onboarding an Internal Staff member.
0:50 – 1:55	**2. Catalog, Plans, Taxes & Discounts**	**Admin**	Create a software product with a brand variant (choosing “Odoo” adds 560 to price). Configure a recurring billing plan (daily, weekly, monthly, yearly) with pause, auto-close, and renewal rules. Set up automated tax rules and a seat-based discount rule with usage limits.
1:55 – 2:55	**3. Quote to Active Subscription**	**Internal Staff**	Generate an offer from a Quotation Template with pre-filled lines and validity dates. Show subscription number, dates, payment terms, and line totals with the bulk seat discount. Transition status through Draft → Quotation → Confirmed → Active.
2:55 – 4:00	**4. Billing Day, Payments & Portal**	**Internal Staff & Customer**	Auto-generate the recurring invoice with calculated taxes and discounts. Confirm, send/print the invoice, and log a payment (method, amount, date, note) to mark it Paid. Switch to the Customer Portal to view/manage subscriptions, pause/renew, and download invoices.

Timestamp	Demo Phase	Active Role	Core System Capabilities Demonstrated
4:00 – 4:45	**5. Month-End Finance Reporting**	**Admin / Finance Lead**	Review the executive summary view displaying active subscriptions, collected revenue, and overdue invoices with interactive filters and sub-two-second response time across thousands of records. Close out an expiring subscription to show the final Closed state.

2. Scene-by-Scene Production Script

Scene & Timing	On-Screen Action (Visual Cue)	Voiceover Script (Spoken Audio)
Scene 1: Intro & Access Control **0:00 – 0:50 (50s)**	Display a brief title card showing Brightloop Software's manual bottlenecks (spreadsheets, missed renewals, hand-typed invoices, scrolling through bank statements), then transition to the login screen. Register a new customer account. First test a duplicate email or weak password to show real-time validation failing, then enter a valid password (8+ characters, uppercase, lowercase, special character). Trigger the “Forgot Password” flow and show the reset link arriving at the registered email. Switch to the Admin browser window, open User Management, and create a new Internal Staff account, comparing the three permission tiers.	“Brightloop Software sells everything on subscription, but running recurring billing on spreadsheets means renewals get missed, invoices go out wrong, and finance spends days matching bank statements by hand. To solve this, we built a unified Subscription Management System. Let's follow a billing month at Brightloop, starting with a new customer signing up. Each email is strictly unique, and passwords require more than eight characters with uppercase, lowercase, and special characters—backed by automated email password recovery. Role-based access keeps the system secure: Customers see only their self-service portal, Internal Staff manage day-to-day operations with restricted access, and only the Admin controls system-wide settings and staff onboarding.”

Scene & Timing	On-Screen Action (Visual Cue)	Voiceover Script (Spoken Audio)
Scene 2: Launching Plans, Taxes & Discounts **0:50 – 1:55 (65s)**	Logged in as Admin. Navigate to Products and create a new software product with its name, type, sales price, cost price, and internal notes. Add a Brand attribute where selecting the "Odoo" variant automatically adds 560 to the sales price. Navigate to Recurring Plans. Create a plan specifying cost, billing interval (daily, weekly, monthly, or yearly), minimum quantity, and availability dates. Toggle the plan lifecycle controls: auto-close on end, early close, pause, and renew. Open Taxes and Discount Rules. Show the configured tax percentage, then create a new Discount Rule for multi-seat orders: choose fixed amount or percentage, set minimum purchase/quantity, start and end dates, a usage limit, and apply it to specific products or whole subscriptions.	"Next, Brightloop launches a new product. Logged in as the Admin, we enter the product's name, type, sales price, cost price, and notes, and configure dynamic variants—for example, selecting the Odoo brand variant automatically adds 560 to the base price. We then pair the product with a billing plan, defining whether it bills daily, weekly, monthly, or yearly, along with minimum quantities and availability dates. Plan by plan, the Admin decides whether subscriptions close on their own, or allow early closing, pausing, and renewal. Finally, when customers ask for a better price on extra seats, only the Admin can create discount rules. We configure a percentage or fixed discount with a minimum quantity, start and end dates, and a maximum usage limit—alongside automated tax rules—so discounts apply and expire automatically without manual tracking."
Scene 3: Turning a Quote into a Subscription **1:55 – 2:55 (60s)**	Switch to the Internal Staff browser window. Open Subscriptions and click "New" using a pre-configured Quotation Template. Point out the validity period and pre-populated product lines. Select the customer, choose the "Odoo" brand variant (+560), and increase the seat quantity to meet the discount rule threshold. Highlight the generated Subscription Number, start date, expiry date, payment terms, unit price, taxes, and calculated line amount. Step through the status progression bar clearly: click from Draft → Quotation → Confirmed → Active.	"Now let's switch to our Internal Sales team preparing an offer for a large customer. Instead of building quotes from scratch, the sales rep loads a Quotation Template that already includes the right plan, product lines, and validity window. Each subscription generates a unique reference number and records the customer, plan, start date, expiry date, and payment terms. As we select the Odoo variant and increase the seat quantity, the line items calculate unit prices, taxes, and eligible multi-seat discounts automatically. As the deal progresses, staff move the subscription smoothly from Draft to Quotation, Confirmed, and finally Active—giving the entire team real-time visibility into where every contract stands."

Scene & Timing	On-Screen Action (Visual Cue)	Voiceover Script (Spoken Audio)
Scene 4: Billing Day, Payments & Customer Portal **2:55 – 4:00 (65s)**	Trigger the Billing Day invoice generation run (or click Create Invoice on the active subscription). Open the newly created Draft invoice showing pre-filled customer details, product lines, automatic tax rules, and the active seat discount. Click Confirm to move the invoice from Draft → Confirmed, demonstrate the Send and Print actions, and click Register Payment. Enter the payment method, amount, date, and reference note, transitioning the invoice status to Paid. Switch to the Customer Portal browser window. Show the customer viewing their active subscription, toggling an add-on or checking pause/renewal options, and viewing/downloading their Paid invoice.	“On billing day, hundreds of subscriptions come due at once, and nobody types invoices by hand. Our billing engine generates invoices directly from active subscriptions with customer details, product lines, automated taxes, and active discounts already filled in—ensuring nothing is ever billed twice or skipped. Staff can confirm, cancel, send, or print any invoice. When the money comes in, we record the payment with its method, amount, date, and note against the invoice, moving it from Draft to Confirmed to Paid. Switching to the Customer Portal, the customer can view and manage their own subscriptions, check renewal dates, and download paid or outstanding invoices anytime without having to email support.”
Scene 5: Month-End Finance Review **4:00 – 4:45 (45s)**	Switch back to the Admin / Finance dashboard. Show summary KPIs for Active Subscriptions, Total Collected Revenue, Outstanding Balance, and Overdue Invoices. Use the interactive filters to isolate overdue invoices that need to be chased, and briefly demonstrate closing an expired subscription (Active → Closed). Show a quick page refresh or filter switch across thousands of seeded records responding in under two seconds.	“At the end of the month, the finance lead gets instant answers instead of spending days building manual reports. One unified dashboard displays active subscriptions, collected revenue, payments, and overdue invoices so the team can chase unpaid accounts before they turn into lost revenue. Even with thousands of subscriptions on the books, our optimized queries ensure every filter and summary view responds in under two seconds—giving Brightloop Software a complete, scalable backbone for recurring revenue.”

Production & Recording Checklist

- **Seed Realistic Volume Data:** Before recording, populate the database with sample customers, active subscriptions, paid invoices, and several overdue invoices so the final Finance Dashboard looks realistic and proves the sub-2-second performance requirement.
- **Use Three Separate Browser Profiles:** Keep three browser windows open side-by-side—logged in as **Admin**, **Internal Staff**, and **Customer**—so you can switch views smoothly without pausing to type credentials repeatedly.
- **Highlight State Transitions Explicitly:** Pause the cursor briefly whenever a subscription transitions (*Draft → Quotation → Confirmed → Active → Closed*) or an invoice updates (*Draft → Confirmed → Paid*) so evaluators can clearly verify every lifecycle requirement.
